

SATURN Vision

Fragmented landscape management governance leads to uncomplete climate strategies where cities are analysed independently from their natural landscape overlooking its potential.

The project is based on the experience of 3 cities and HUBs: Trentino (Italy), Birmingham (UK) and Gothenburg (Sweden); the aim is to reintegrate the natural assets within the climate change impact strategies and to expand its model by creating a wider initiative.

SATURN Mission

- Establish a strong narrative with public and private stakeholders to reconnect them with their landscape identity and geographic characteristics.
- Build up a comprehensive and flexible framework to guide cities to implement adapted projects about multifunctional use at different scale on the land surrounding the cities.
- Make the initiative financially sustainable and scalable through scouting actions of funding and collaboration opportunities and the creation of initiatives for capacity building.

Göteborg Workshop

09.2020

Materials from Birmingham Workshop and Conference

Is now available <u>online</u> the first video with the evidences of the event held in Birmingham on 31st July and 01st August 2019.

EU Cities and Regions Week

SATURN was one of the project show-cased by EIT Climate KIC during the event organised by EU Commission in Bruxelles dedicated to the territorial bodies. Under the coordination of Valerio Bruschi, representatives of Trentino HUB (from University of Trento and Municipality of Pergine Valsugana) presented how they are addressing the transformation in change enhancing cultural land-scape and valorising local resources.

OpenEARTH CONFERENCE

Dr Nikologianni presented SATURN Project during the Open EARTH conference in February 2020 and chaired the 'Policy - Stakeholders Involvement' session. The Conference aimed to address the main issue of climate change adaptation and mitigation in primary and secondary sectors through the promotion of agricultural practices and modern effective technologies.

Göteborg Workshop

Due to Coronavirus emergency which have implemented travel restrictions for business, the team of SATURN decided to postpone the SATURN Conference to be held in Goteborg, Sweden, at the end of May.

Instead, the Conference will be held the 22nd-23rd of September 2020 and we hope to see then. More information about the conference and how to register for it will be available both online and in the next newsletter.

Youth engagement 01.2020 05.2020

R-Urban metabolism 02.2020 08.2020

Enhance connectivity 12.2019

Governance model 01.2019

Enhance connectivity

After the mapping is completed in the municipality of Pergine Valsugana, which started at the end of 2019, a mapping of private green areas is underway in Trento. Such mapping will be used to develop an innovative study on the contribution of private green area to ecological connectivity and the creation of ecological urban corridors. Vertical green systems will also be considered together with the possibility of taking into calculation the urban potted vegetation.

R-Urban Metabolism

In collaboration with the project "NUTRIRE TRENTO", the mapping of the urban and rural metabolism of the city of Trento has begun. Data collection has started with the food system. In the coming months, data relating to the cycle of CO2 in the Trentino food system will be collected and processed.

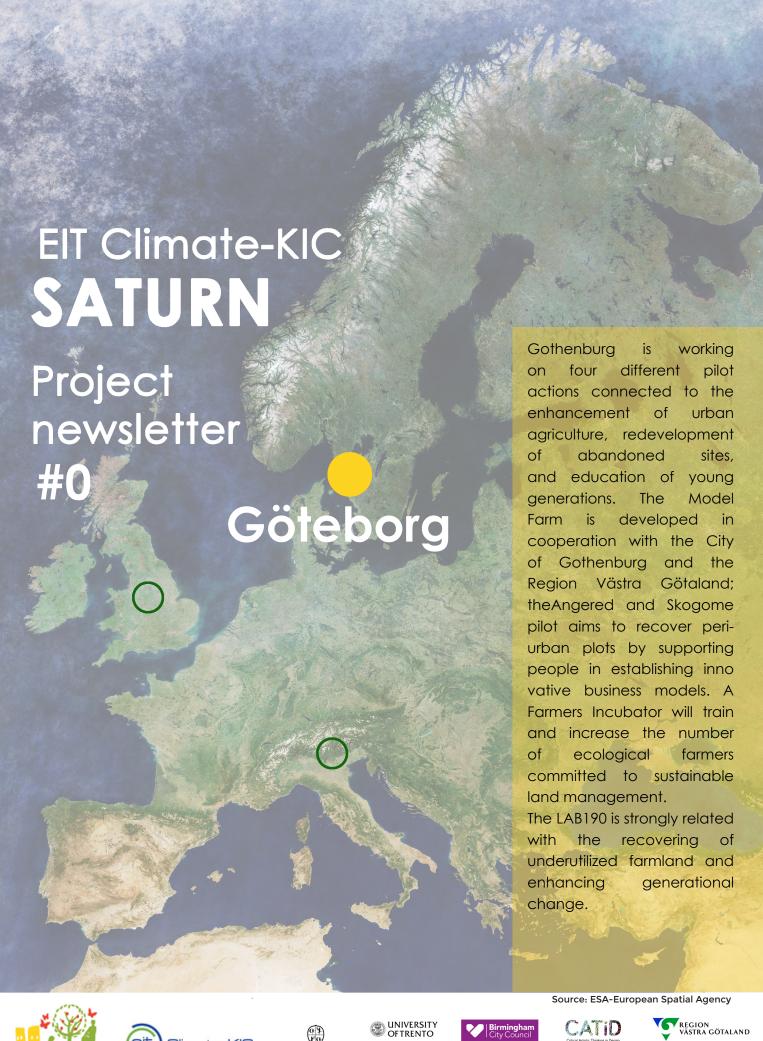

Governance model

In continuity with the experience of "Nutrire Trento", initiatives are supported with the aim to shorten the food supply chain; promoting the use of abandoned or underused spaces, also collectively, and in particular to develop proximity agricultural production.

Youth engagement

In January 2020, actions were launched to involve the younger population through collaboration with the ALPJobs project (concluded in February 2020) and with the involvement of youth councils and associations in the area.

Farmland alongside road 190 ongoing process 01.2019

The Gothenburg HUB is working on four different pilot cases connected to the enhancement of peri-urban agriculture, populate abondaned farms and farmland with new farmers and educate new farming entrepreneurs and thus creating new links between urban and rural areas.

Testbeds

Farmland alongside road 190

Information material in Swedish has been produced and distributed to involved municipalities. Meetings and discussions with the municipalities about a model and mutual work is in progress. Material directly to existing farmers in the area is about to be distributed.

Testbeds

Farming Incubator

A Farmers Incubator will train and increase the number of ecological farmers committed to market gardening in a peri-urban context. This year's incubator has eight new farming entrepreneurs as participants. Three full day workshops have been held. Mapping of abandoned and underutilized.

Model Farm

The Model Farm is developed by the City of Gothenburg in cooperation with the Region of Västra Götaland. Calculations and metrics from last season have been analysed. The work with a handbook is in process. Klara, the farmer will g o on parental leave in May, a substitute is in the process of being hired.shops have been held. Mapping of abandoned and underutilized.

Stakeholder Mapping and Engagement Activity

SATURN HUBs engage with stakeholders using a wide range of methods. These methods are being recorded and evaluated for their success as part of the SATURN project so that the most effective methods can be identified. On Stage 1 the main aims of our stakeholder engagement process is being identified togetherA with the innovative strategies the HUBs have adopted in terms of stakeholder engagement. This can be drawn/diagrammed with accompanying text.

Capacity Building Document

Capacity Building document is to be included in the common framework together with the SA-TURN Vision. Capacity Building often overlaps with Stakeholder Engagement and Awareness, but as far as this project is concerned Capacity Building will deal with training and advising the HUBs to use their skills that they could then use to train external stakeholders. Therefore we are assuming that SATURN has two types of Capacity Building: a. Internal within Partners, b. External where it 'trains' and informs stakeholders.

Visioning activity

Visioning activities started with a webinar to the partners (recording audio provided) and continue throughout the project. A framework/approach will be provided towards the end of the project, however several parts could be progressed during the process. The HUBs are asked to clarify the spatial vision for each partner region (political, cultural, social, economic and environmental, food, water, biodiversity etc.). The common framework needs to indicate how developing a spatial vision can help socialise the ideas, engage stakeholders and build capacity.
