

can cities push policies that citizens are ready to embrace? How often will

net-zero carbon target ought to be coupled with resilience. The project is a prime example of a still rare but fruitful type of experimentation that couples public authorities, citizen communities and other actors. How far

innovators expect their ideas to be blocked by current regulations? We must stop considering whatever comes from outside our actor group as external, intangible constraints. One way to do that is to create more experiments that involve all stakeholders in the experimentation itself, iteratively probing what other groups are ready for, how it moves the boundaries and opens new possibilities for the whole Do municipalities involved see SATURN's built assets on metrics and on data collection as good enough to trigger bolder action at greater scale -

SATURN is an inspiring, richly human project in the EIT Climate-KIC ecosystem development portfolio. Further developments could connect with our initiatives on carbon farming and integrated landscapes, contribute to the EC's Adaptation Mission on resilient regions and be of interest to the Cities Mission whose 2030

and if not, what is the nature of the barriers? The project brought together three cities with common questions but very different approaches. It took months to create common languages and mutual trust. This experience can tell other cities inspired by SATURN about the actual possibilities to transfer the knowledge, the time to identify what can be transferred and to build confidence that the

a diversity of identities that are all deeply rooted in the landscape. Bringing them out is a way to defragment local communities and to bring actors together for sustainable transformation. PROJECT LEAD: A POINT OF VIEW ALESSANDRO GRETTER -- Fondazione Edmund Mach When in November 2017 for the first time we started a process of discussion and reflection to combine different experiences in Europe connected to the enhancement of the peri-urban landscapes, I did

not know exactly where this journey will land.

approach is relevant to new contexts.

SATURN demonstrates the actionable power of landscape identity, or rather identities. While identity can be used in closed and protectionist ways, looking for a future that is desirable reveals

of events such as Brexit and Pandemic. Both of them serioiusly influenced our plans. Our team was brave enough to succeed with these challenges and maintain the force to keep SATURN on track and capable to involve as many as possible stakeholders in our case

The main aims of SATURN were to try to overcome fragmentation, lack of relationships and valid narratives. Our daily working practices were successfully able to reverse it. SATURN was able to create

bodies in our Hub is willing to continue.

nearby territories or other countries in Europe and beyond.

a perfect mix of experienced professionals with passionate young collaborators (and a large number of students and trainees), to bridge the gap between different stakeholders that sometimes have never met before and, not lastly, to transform scientific approaches into co-creative exercises which favoured the match to different public bodies too. Although some of our original plans have been forced to be adapted to the "new normality", I am

More than 3 years have passed since SATURN take off. During our project we met something unexpected which forced us to diverge from our original aim and trajectories and confront with a couple

studies. And also attract the interest and attention of many others in

happy to read from the feedbacks of our stakeholders (some are presented within this newsletter) that SATURN helped to generate trust and relationships, engagement from various not-interconnected actors and develop a new narrative and language, accompanied by tools, capable to wide the landscape perspective in the peri-urban territories. We expanded these outcomes supporting the collaboration with other projects and initiatives of EIT Climate-KIC (for example with the Deep Demonstration "Resilient Regions", MOTION, LANDSCAPE METROPOLIS and HOLISTIC RESILIENCE and supporting the "Journey" in 2020), with other communities of EIT (as Food) and locally. Summing up what we achieved, I must enlist the huge technical-scientific production with about a dozen of publications and the willingness to act "beyond" the end of SATURN. The tools developed on our activities have been recognized worth to be supported for moving into a more business-oriented

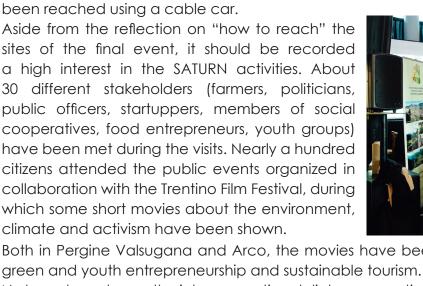

SATURN FINAL EVENT TRENTINO - 13th - 15th October 2021 During our visioning activities with stakeholders we realised that according to their future perspectives, mobility is the most urgent topic

future. This has happened in Trentino with the selection for the "BootStrap Academy" and the "Trentino Start-up Valley" and in Sweden with the award granted by "White Guide". Incredible results which we never expected before, but representing the attention to the work SATURN carried out and some local

a different set of transport when running the final event. Field-visits and open-air meetings, also supported by warm and sunny weather, were done mainly by foot into the places. Approximately 49.049 steps and the corresponding distance of 35,6 km during the 3 days of the final event. The visited locations of the Farm market, Urban Collective Vegetable Garden and Gocciadoro Park in Trento were reached by foot, then the group moved with the regional train to the shores of Lake of Caldonazzo and climbed the steep hills in the surrounding of the magnificent Castle of Pergine Valsugana. On the second day, they visited the Orto San Marco social and urban vegetable garden in Rovereto, reached by national train, and then, by car-pooling, the participants climbed to the terraced landscape of Valle di Gresta, the

"organic valley" of Trentino. The same day in the afternoon a visit took place in the renowned touristic

location of Arco with its flavour of the Mediterranean landscape. After the hybrid workshop, during the last day, the group visited the plateau of Monte of Mezzocorona and its alpine landscape, which has

to be solved. And then we have experienced

Both in Pergine Valsugana and Arco, the movies have been accompanied by a public debate on No less relevant were the intergenerational dialogue meetings organized between the youth members of the COY2021 "Clima Trentino Alto Adige" and the elected representatives of the municipalities of Pergine Valsugana, Arco, San Michele all'Adige, Mezzocorona and Terre d'Adige (overall population of 52.000 inhabitants). The 7 youth involved, supported by 2 senior experts of the Climate Forum of the Autonomous Province of Trento, met and discussed their "Policy Declaration " with 20 mayors and deputies, 3 Senior Managers for School systems and a director of a Tourism Agency. The main target is to raise awareness and discussion about how to co-create solutions to contrast climate emergencies. **NEWS FROM THE PARTNERS**

GOTHENBURG -- Botildenborg Urban Food

GOTHENBURG -- Model Farm prize winner

Excellent news! The model Farm won a prize for one of the best circular projects connected to food in Sweden by "White Guide" (Scandinavian equivalent to the Guide Michelin). The prize will be a 6 month financed process of R&D to further develop the concept of Model Farm connected

This is also accompanied by the news that a 4th season for the Model Farm will run in 2022! In fact, the department of Primary schools at the Municipality of Gothenburg will finance the city farmer Klara Hansson. If, as foreseen, the Property Management Department also can finance a second person we can expand and start to establish the first satellite farm of the Model Farm

VOICES FROM STAKEHOLDERS

One of the main objectives of the Trentino Alto Adige Youth Conference on Climate was to foster a structured dialogue between the youth and the Trentino public administrations. And to achieve it, it was essential to have counted on the contribution of the Saturn project, which made possible a transparent and constructive dialogue between the young and mayors and councilors, who have shown their desire to strengthen processes of active participation of their citizens in facing the great

challenges posed by Climate Change

The Saturn project was coherently

Participation in the SATURN project was an important opportunity to offer its citizens an experience of

steps. CH -CB, Birmingham KJM, Birmingham PF, Trentino

Istart by quoting a member of the CSA when I asked him why he joined the CSA and what advantages he perceived from his membership: "because it seemed great to me... then I realised that it is AWESOME". I completely agree with these simple words. With the members of the CSA, I can discuss various aspects of my work and my life. First of all, talking to the producers has reinforced my desire to try not to exploit our land. I have discussed ways of producing that are different from my own, trying to integrate and improve it to increasingly pursue the protection of the same land that, as Stefania (another CSA producer) says, we have on loan from our children. There is always something to learn from anyone you meet along the way, and this experience has confirmed this by exceeding all expectations. Talking to our "eaters", on the other hand, I learned not to take anything for granted: for those who don't do our job everything is new and unthinkable, so our task - in addition to producing - is to share our experiences with those who don't have them, to understand their needs and communicate ours.

Generally a really useful process and some great tools to provide a structure for discussion and recording. AS, Birmingham Really enjoyable process, and good to see some plans for next It is another step towards reimagining this vast forgotten landscape, its towns and cities and it has never been needed more urgently than to inform the post-Covid green recovery. In Phase 2 of the pandemic, our city project on transforming food systems experimented with a new The SATURN project for our Municipality represented

area. Being involved us in a simple way, making us grow on the purposes envisaged by the project. These types of projects will make it possible to guide the territories to implement projects taking into account the resources present in the area and cultural identity. FD, Trentino
